

Connecting to the Wireless Network

On a Chromebook, do the following:

1. If you haven't logged into the Chromebook yet, choose the FRSD-Open network to continue.
2. Once logged in, connect to FRSD-Wireless.
3. You should see a box similar to below.
4. Set the options for EAP method, Phase 2 authentication, and Server CA Certificate to match the picture
5. In the Identity box, put in your Windows username (same as library or business lab). Do not put in your whole email address.
6. Use the password that goes with your Windows username.
7. Check the box marked 'Save identity and password' to remember the settings for next time.
8. This setup will have to be repeated when using a different Chromebook for the first time.
